

## Preparatory mathematics course for first year bachelor students (B.Sc. Psychology)

### *Preparatory course*

Many modules of the B.Sc. Psychology curriculum require knowledge of upper secondary school mathematics. This preliminary course is intended to close gaps in knowledge that have arisen due to the pandemic stresses in school life and to refresh the prerequisite upper secondary school subject matter. This is not a necessary part of the curriculum, but a targeted offer for those students in the first semester for whom the mathematics content of high school were a clear challenge. Two parallel courses are offered, which take place once a week in the first three weeks of the semester (starting from the 5th September 2022). The course will be held in German.
