

How to replicate the analyses in:

Mader & Schoen, 2014. Chancellor Merkel, the European debt crisis and the AfD: An analysis of voting behaviour in the 2013 Federal Election

Three succeeding steps are necessary to replicate the analyses:

1. Run Stata. Mader_Schoen_2014_replication_stata2mplus.do prepares data and create an Mplus data file (DATA_btw13.dat).
2. Run Mplus. Using DATA_btw13.dat, Mader_Schoen_2014_cfa.inp replicates the confirmatory factor analysis and calculates the factor scores. A new data set (DATA_btw13_fs.dat) is created that includes the factor scores.
3. Run Stata. Using DATA_btw13_fs.dat, Mader_Schoen_2014_replication_analyses.do replicates the remaining analyses.
